

/POKEMO

CONNECT TO THE FEELING OF YOUR LOVED ONE

DESIGN BRIEF

/POKEMO is a tactile interactive communication device designed for long distance couples. /POKEMO can not only sense your mood with embedded sensors, but get to know you and your emotion over time as well, which makes it much easier to share your emotion with your partner. Wearable and convenient, it provides better interaction experience and could strengthen emotion bond between long distance couples.

DESIGN CONTEXT

PHYSICAL SEPARATIONS

Most of the long distance couples' conversations rely on Internet telepresence such as IM, video/audio calls, etc. Of which the absence of physical contact lessens communication's intimacy.

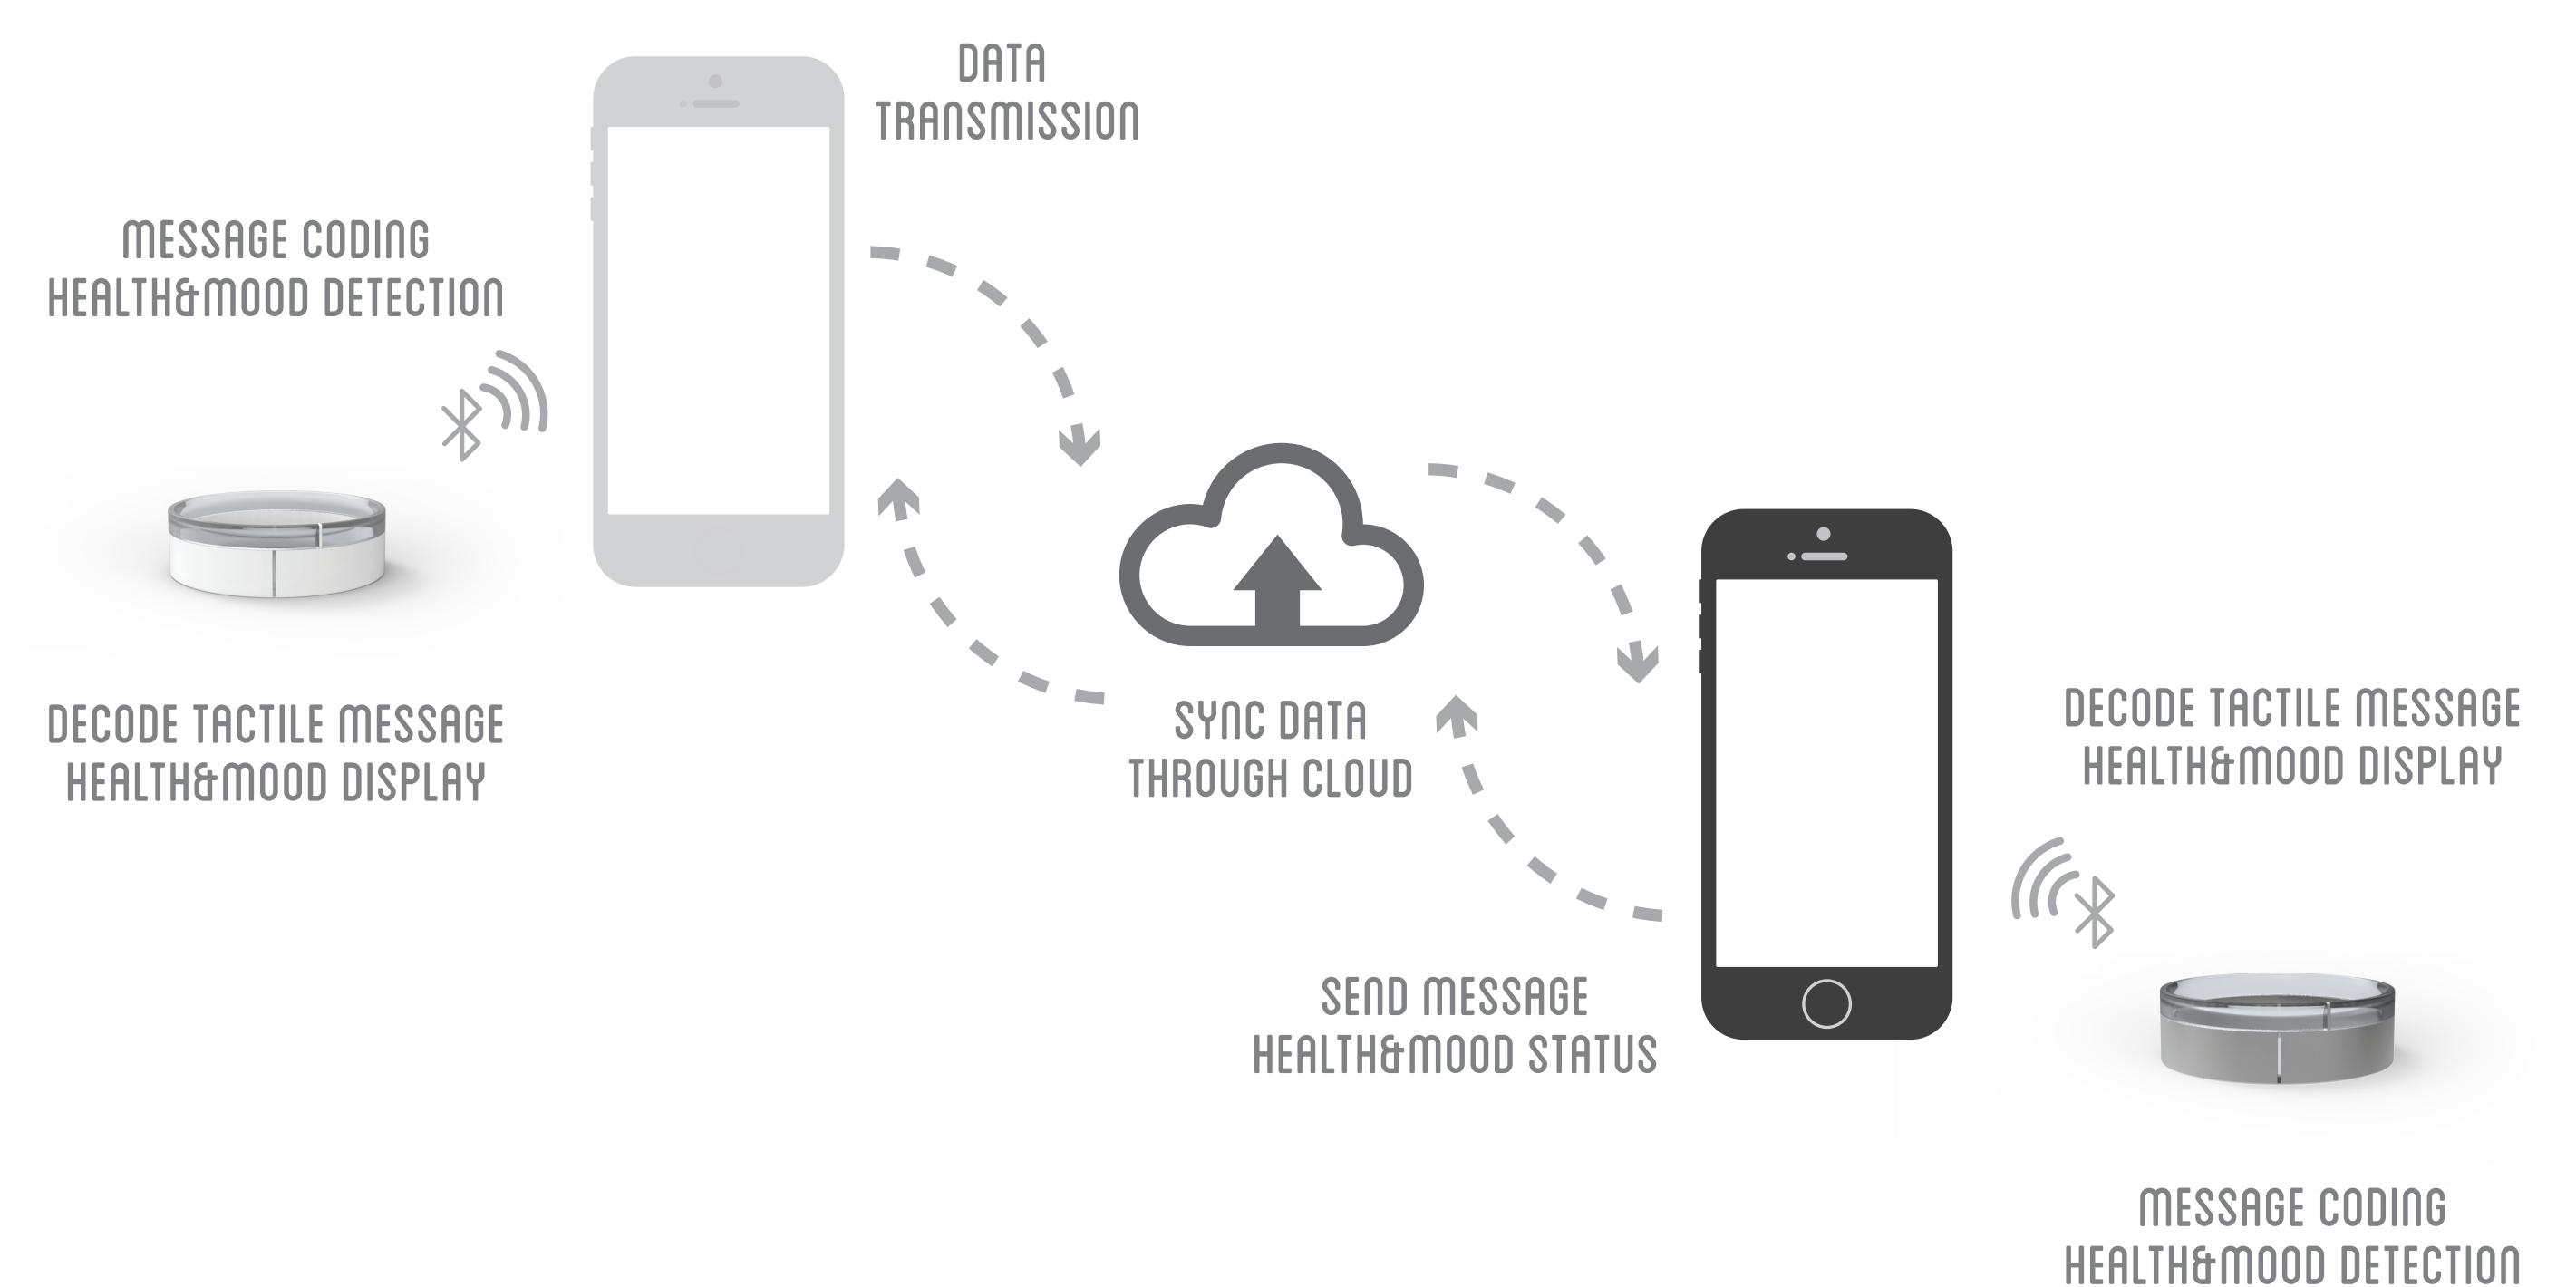

SCHEDULE DIFFERENCE

Schedule difference and potentially time difference are considered another obstacle of emotional communications. A more convenient and intuitive approach is preferable.

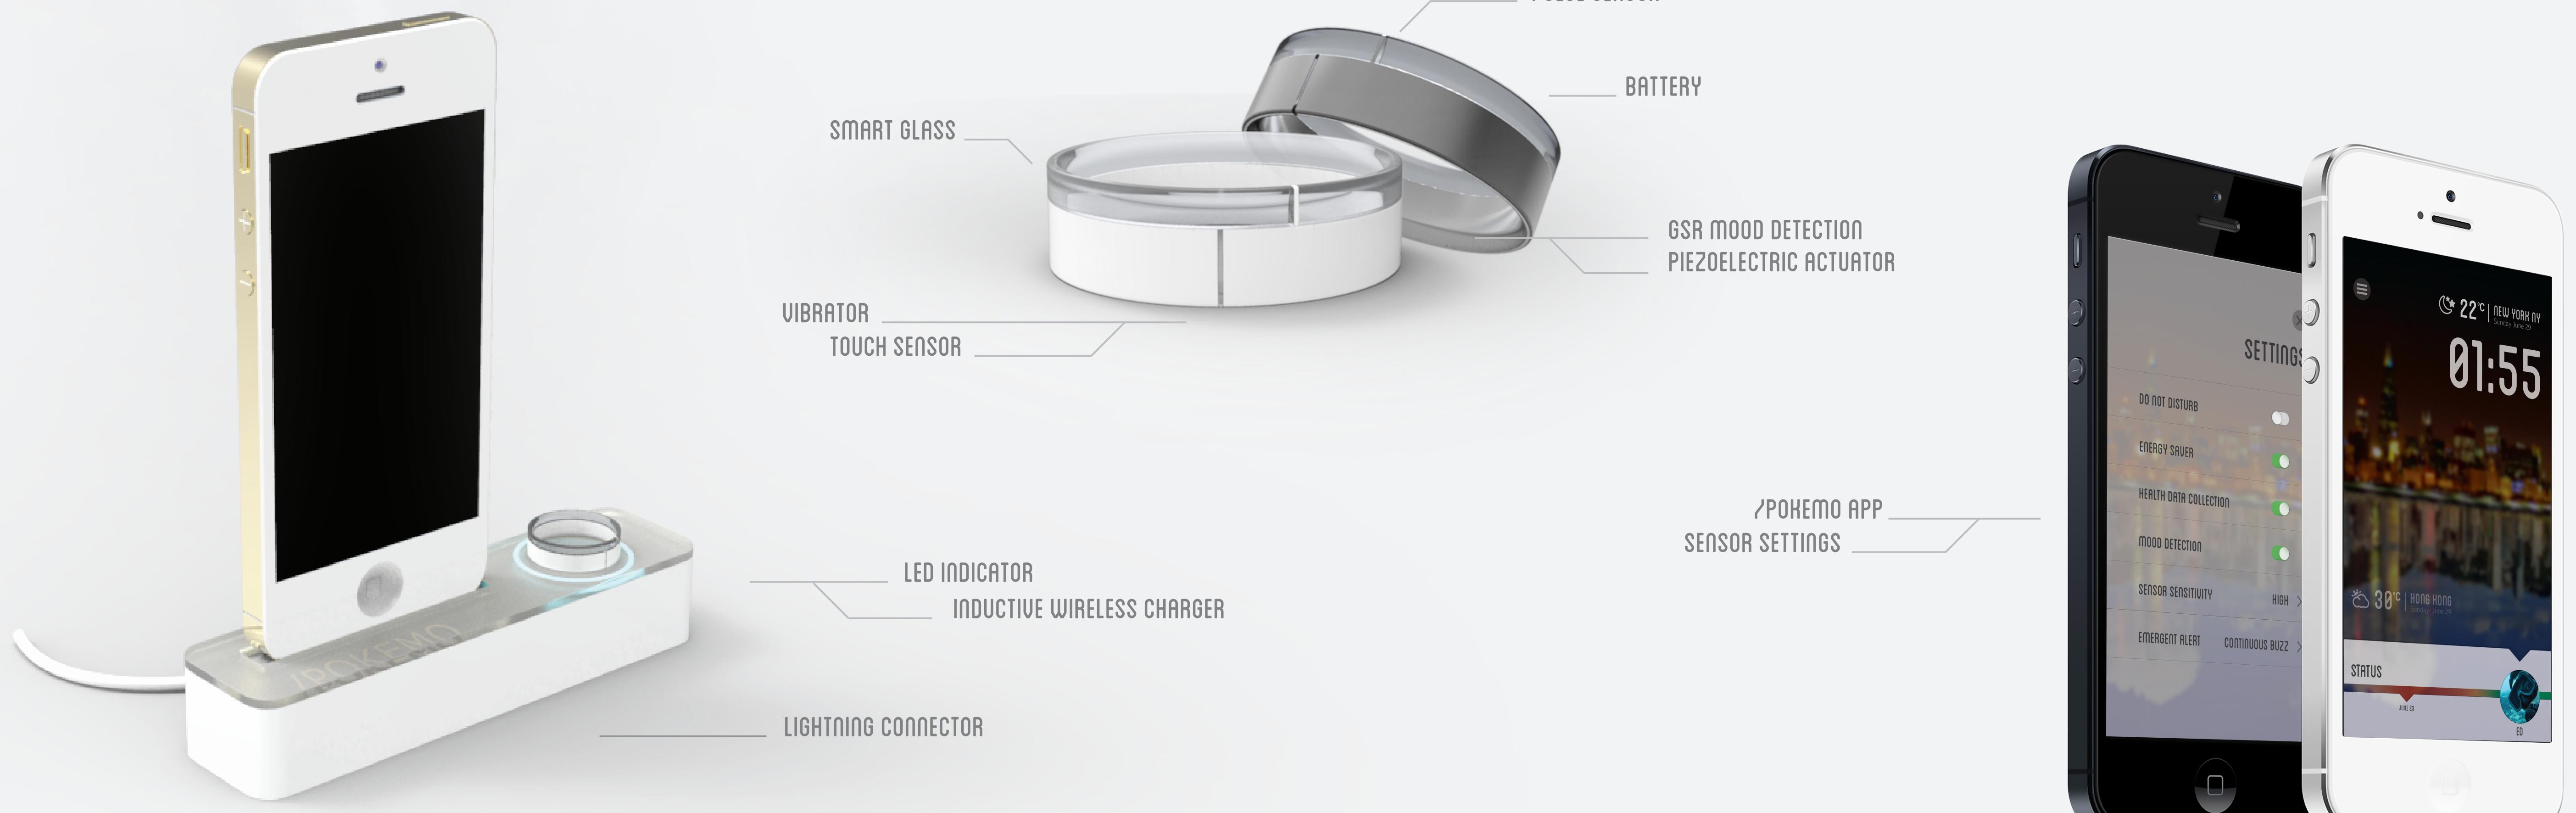

PERSONALITY VARIATIONS

Personality variation and gender difference may lead to misunderstanding. An intelligent device could keep you updated on your partner's mood and more effectively deliver your affection.

INTERACTION SYSTEM

SPECIFICATIONS
